What is the general project idea?

An application that helps people with special needs by offering various services such as:

Saving medical records

booking appointments

making communication between them and the doctors much easier.

Who are the targeted users?

People struggling with special needs.

What are the main problems we are trying to solve?

Making it easy to book an appointment.

Saving time.

Making communication with the doctors much easier.

Saving medical records.

Making it easy to book a caretaker.

Helping the community by adding a “Volunteering” option to help blind people via video calls.

How are you going to find users?

By assigning our application to the ministry of health as they have medical records of people struggling with special needs, which makes it easier for us to reach them.

How are you going to collect the data from the users?

By collecting questionnaires.

List of 5 needs

- The users need a “Home Examination” feature.
- The users need a “Patient's companion” feature.
- The users need a “Private conversation between them and the doctor” feature.
- The users need to know if it's needed to go to the hospital.
- The users need the application to be fast at responding and money transfer.

List of 5 insights

- Due to the difficulty of reading lips for deaf people, we can make the conversation between the deaf and the doctor via video call
- Watching people with special needs doing their tasks will give us ideas on how to help them and make it easier.
- Meeting a caretaker or a legal guardian and talking to them about how we can improve our application to help them take care of their family member (who's struggling with special needs).
- After reviewing our survey we saw that many people struggle with help inside the hospital, and by fixing that problem we can help them by using our application to get the help they need.
- Asking people with special needs about what makes their trip to the hospital a bit difficult, can open opportunities for us.

Doctor's Helpline

Our application makes it easy for you to communicate with the doctor through a private chat or video call. It specifically caters to people with special needs and the elderly.
